Education

University of Guelph May 2027

Bachelor of Computing in Computer Science, Minor in Business Economics *Guelph, Ontario*

- **Relevant Coursework**: Data Structures and Algorithms, Operating Systems, Computer Networks, Theory of Computation, Cryptography, Parallel Programming, Software Analysis & Design, Mobile Computing, Discrete Mathematics, Statistics
- **Cumulative GPA**: 4.0/4.0 | **Dean's Honours List** each semester

Experience

HubSpot May 2026 – Aug 2026

Software Engineer Intern | *Java, Kafka, MySQL, Grafana* *Cambridge, MA*

- Led the migration of **1M+ apps** to granular permissions by designing distributed workflows for permission backfill and rollout, coordinating across teams to safely transition existing integrations and enforce least-privilege access controls
- Built Kafka consumers processing **250K+ events/day** to sync permission state changes across services, eliminating consistency gaps during the migration and keeping apps' permission status accurate throughout rollout
- Onboarded a new teammate onto the migration system, delegating implementation work and reviewing code
- While on-call, identified a gap in debugging workflows and built an AI tool to triage and trace root causes faster

SAP Jan 2026 – Apr 2026

Software Developer Intern | *Go, Kubernetes, Docker, Python, Grafana, Jenkins* *Waterloo, ON*

- Owned and resolved a customer issue end-to-end before Q1 deadline, participating in architecture discussions and collaborating across teams to diagnose a complex database access conflict, delivering a targeted fix
- Engineered custom, secure MCP servers for Jenkins and Grafana, integrating them into Claude Code to enable AI-native access to logs and pipelines, reducing debugging time from **10+ minutes to seconds**

Evertz.io May 2025 – Aug 2025

Software Developer Intern | *Rust, Python, AWS, Linux, Mabl, Honeycomb* *Toronto, ON*

- Led the delivery of configurable audio tolerance controls, improving playback quality by eliminating audible pops and reducing lip-sync drift, while also mentoring teammates through design discussions and code reviews
- Designed an adaptive retry system for channel launch failures, cutting manual intervention by **10+ hours** per week with Step Function recovery and DynamoDB state persistence, reducing on-call incidents and improving system resilience

Evertz.io May 2024 – Dec 2024

Software Developer Intern | *Python, AWS, Linux, Jenkins, Jira, Postman* *Toronto, ON*

- Optimized CI/CD workflows by identifying and implementing a faster linting solution and parallelizing static code analysis, cutting GitHub Actions runtime from **4:30 to 1:15** and reducing CI compute cost by more than **70%**
- Designed and implemented an API Gateway for command execution and output retrieval on AWS EC2 instances, enabling role-based command execution and improving accessibility and security

Projects

Reservely | *Launch* | *Node.js, Vite, React, SQL, Supabase, Vercel*

- Co-founded Reservely, a lightweight, plug-and-play reservation system tailored for small restaurants and cafes
- Secured **$3,000** in non-dilutive funding from the Ontario government to build the MVP and support early development

SmartScore | *Launch* | *Python, Rust, AWS, MongoDB, pandas, NumPy, Supabase* *Repository*

- Built SmartScore, a full-stack web app predicting NHL goal scorers for the Tim Hortons Hockey Challenge, achieving **31%** accuracy and improving season-over-season, approaching the current global leader (∼34%)
- Automated predictions with AWS Step Functions, Lambdas, and EventBridge, removing daily manual input and strengthening scalability through a microservices architecture designed for fault tolerance and modularity

Imaginate | *Launch* | *Python, Flask, Google Cloud Platform, React, TypeScript, Tailwind CSS* *Repository*

- Co-developed an educational game helping users spot real vs. AI-generated images based on a daily theme
- Attracted **1,000+ users** in the first year, driving strong user engagement and fostering high retention rates
- Constructed a CI/CD pipeline with GitHub Actions, Docker, and Google Cloud Platform to automatically build, test, and deploy Cloud Run functions, which reduced development cycle time by **50%**

Technical Skills

Languages: Python, Go, Rust, Java, C, JavaScript, TypeScript, SQL, Bash, HTML, CSS

Tools: Linux, Docker, AWS, Git, Claude Code, MCP, Jenkins, GitHub Actions, MongoDB, Supabase, Jira, Confluence, Grafana

Frameworks/Libraries: React, Next.js, Tailwind CSS, Flask, Node.js, Vite, JUnit, pytest, PyTorch, scikit-learn, ONNX, pandas
