EDUCATION

University of Guelph

Expected: April 2027

Bachelor of Computing in Computer Science, Minor in Business Economics

Guelph, Ontario

- **Relevant Coursework:** Data Structures and Algorithms, Operating Systems, Computer Networks, Theory of Computation, Cryptography, Parallel Programming, Software Analysis & Design, Mobile Computing, Discrete Mathematics, Statistics
- **Cumulative GPA:** 3.9 | **Dean's Honours List** each semester

EXPERIENCE

Evertz.io

May 2025 – Aug 2025

Cloud Developer Intern | Rust, Python, AWS, Linux, Mabl, HoneyComb

Toronto, ON

- Led end-to-end delivery of a core platform feature by driving architectural decisions, breaking down tasks, and mentoring teammates through code reviews and asynchronous collaboration, fostering team alignment and elevating code quality
- Developed an adaptive retry system for channel launch failures, cutting manual intervention by **93%** and significantly reducing on-call incidents, improving developer experience and service reliability
- Bubbled up nested Step Function errors and parsed them into human-readable formats, reducing developer triage time

Reservely

May 2025 – Present

Technical Founder | Node.js, Vite, React, SQL, Supabase, Vercel

Toronto, ON

- Co-founded Reservely, a lightweight, low-cost restaurant reservation system designed for small businesses
- Secured **\$3,000** in non-dilutive funding from the Ontario government to develop the MVP and support early growth
- Created a plug-and-play reservation link system, allowing restaurants to start accepting bookings with minimal setup

Clearspring Capital Partners

Mar 2025 – May 2025

Software Developer Contractor | Python, Rust

Toronto, ON

- Built an automated capital allocation tool to support firm-specific waterfall distribution rules for returning capital and allocating profits, replacing a workflow too complex for a feasible Excel solution
- Used across the accounting team to eliminate manual errors and a 20+ hour workflow, saving over **\$2,500/month**

Evertz.io

May 2024 – Dec 2024

Software Developer Intern | Python, AWS, Linux, Jenkins, Jira, Postman

Toronto, ON

- Optimized CI/CD workflows by identifying and implementing a faster linting solution, streamlining static code analysis through parallelization, which cut GitHub Actions runtime by over **70%** and significantly reduced build costs
- Automated Blue-Green deployment workflows using AWS Step Functions and Lambda, integrating EventBridge and WebSocket sessions to deliver real-time status updates to clients and improve deployment transparency
- Designed and implemented an API Gateway for command execution and output retrieval on AWS EC2 instances, allowing users to run commands with varying levels of permission, improving accessibility and security

PROJECTS

SmartScore | [Launch](#) | Python, Rust, AWS, MongoDB, pandas, NumPy, Supabase

[Repository](#)

- Built SmartScore, a full-stack web app that predicts NHL goal scorers for the Tim Hortons Hockey Challenge
- Leveraged AWS using Step Functions, Lambdas and EventBridge to automate daily predictions and calculations, reducing manual input and enabling a scalable, **microservices-based architecture**
- Improved backend performance and reduced AWS costs by integrating MongoDB and rewriting core logic in Rust

imagine.ai | [Launch](#) | Python, Flask, Google Cloud Platform, React, TypeScript, Tailwind CSS

[Repository](#)

- Co-developed an educational game helping users spot real vs. AI-generated images based on a daily theme
- Attracted **1000+ users** in the first year, driving strong user engagement and fostering high retention rates
- Constructed a CI/CD pipeline with GitHub Actions, **Docker**, and **Google Cloud Platform** to automatically build, test, and deploy Cloud Run functions, reducing development cycle time by **50%**

TECHNICAL SKILLS

Languages: Python, Rust, Java, C, JavaScript, TypeScript, SQL, Bash, HTML, CSS

Tools: Linux, Docker, AWS, Bazel, Git, GitHub Actions, Jenkins, MongoDB, Supabase, JIRA, Confluence, GitHub Copilot

Frameworks/Libraries: React, Next.js, Tailwind CSS, Flask, Node.js, Vite, JUnit, pytest, PyTorch, scikit-learn, ONNX, pandas
