EDUCATION

University of Guelph

May 2027

Bachelor of Computing in Computer Science, Minor in Business Economics

Guelph, Ontario

- **Relevant Coursework:** Data Structures and Algorithms, Operating Systems, Computer Networks, Theory of Computation, Cryptography, Parallel Programming, Software Analysis & Design, Mobile Computing, Discrete Mathematics, Statistics
- **Cumulative GPA:** 3.9 | **Dean's Honours List** each semester

EXPERIENCE

SAP

Jan 2026 – Apr 2026

Incoming Software Developer Intern | Go, Python, Kubernetes, Docker, AWS, GCP

Waterloo, ON

- Incoming developer at SAP in the Cloud Database team, building cloud-native microservices for provisioning databases

Evertz.io

May 2025 – Aug 2025

Cloud Developer Intern | Rust, Python, AWS, Linux, Mabl, HoneyComb

Toronto, ON

- Led the delivery of configurable audio tolerance controls, improving playback quality by eliminating audible pops and reducing lip-sync issues, while mentoring teammates through design discussions and code reviews
- Designed an adaptive retry system for channel launch failures, cutting manual intervention by **10+ hours** per week with Step Functions recovery and DynamoDB state persistence, reducing on-call incidents and improving site reliability
- Reduced triage time from **5 minutes to instant** by bubbling up and parsing root causes of nested Step Function failures

Clearspring Capital Partners

Mar 2025 – May 2025

Software Developer Contractor | Python, Rust

Toronto, ON

- Engineered an automated capital allocation system, replacing a workflow too complex for a feasible Excel solution
- Enabled the accounting team to replace a **20+ hour** manual spreadsheet workflow using Python and Rust, implementing firm-specific distribution rules, eliminating errors, and improving reliability and consistency

Evertz.io

May 2024 – Dec 2024

Software Developer Intern | Python, AWS, Linux, Jenkins, Jira, Postman

Toronto, ON

- Optimized CI/CD workflows by identifying and implementing a faster linting solution and parallelizing static code analysis, cutting GitHub Actions runtime from **4:30 to 1:15** and saving an estimated **\$1,350 per year** in build costs
- Designed and implemented an API Gateway for command execution and output retrieval on AWS EC2 instances, which allowed users to run commands with varying levels of permission and improved accessibility and security

PROJECTS

Reservely | [Launch](#) | Node.js, Vite, React, SQL, Supabase, Vercel

- Co-founded Reservely, a lightweight, low-cost reservation system tailored for small restaurants and cafes
- Secured **\$3,000** in non-dilutive funding from the Ontario government to build the MVP and support early development
- Implemented a plug-and-play booking link, enabling restaurants to start accepting reservations with minimal setup

SmartScore | [Launch](#) | Python, Rust, AWS, MongoDB, pandas, NumPy, Supabase

[Repository](#)

- Built SmartScore, a full-stack web app that predicts NHL goal scorers for the Tim Hortons Hockey Challenge, achieving an improving prediction accuracy of **31%**, close to the global leader at 33%
- Automated predictions with AWS Step Functions, Lambdas, and EventBridge, removing daily manual input and strengthened scalability through a microservices architecture designed for reliability and modularity
- Improved backend performance and reduced AWS costs by integrating MongoDB and rewriting core logic in Rust

Imagine | [Launch](#) | Python, Flask, Google Cloud Platform, React, TypeScript, Tailwind CSS

[Repository](#)

- Co-developed an educational game helping users spot real vs. AI-generated images based on a daily theme
- Attracted **1000+ users** in the first year, driving strong user engagement and fostering high retention rates
- Constructed a CI/CD pipeline with GitHub Actions, Docker, and Google Cloud Platform to automatically build, test, and deploy Cloud Run functions, which reduced development cycle time by **50%**

TECHNICAL SKILLS

Languages: Python, Rust, Java, C, JavaScript, TypeScript, SQL, Bash, HTML, CSS

Tools: Linux, Docker, AWS, Bazel, Git, GitHub Actions, Jenkins, MongoDB, Supabase, JIRA, Confluence, GitHub Copilot

Frameworks/Libraries: React, Next.js, Tailwind CSS, Flask, Node.js, Vite, JUnit, pytest, PyTorch, scikit-learn, ONNX, pandas
